DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/14/2008 has been entered.
2. Applicant has amended independent claims 1, 5, 10, 11, and 14, and cancelled claims 3 and 12 without prejudice or disclaimer. This has placed the application in position for allowance, with an Examiner's Amendment to the Title, next, for reasons given below.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

In the **Title**:

In the Title, after "Control system", add the following -- **outputting received speech with display of a predetermined effect or image corresponding to its ambient noise power spectrum --.**

In the **Abstract:**

Replace the current Abstract with the following:

-- **A control system receiving an input signal, comprising speech with ambient noise, determines the ambient noise power spectrum, retrieves control information corresponding to the closest-matching ambient noise power spectrum, and outputs the input signal along with display of a predetermined effect or image corresponding to the ambient noise power spectrum. --**

Allowable Subject Matter

4. Claims 1, 2, 5-11, and 14-19 are allowed over the prior art of record. The following is an examiner's statement of reasons for allowance:

5. Independent claims 1, 10, and 19 are allowed because the prior art of record does not teach nor fairly suggest that a received sound input, consisting of speech and ambient noise, which input is subsequently output without change, be supplemented at the output with a displayed image or predetermined effect, wherein the displayed image or predetermined effect corresponds to the best match of the ambient noise power

Art Unit: 2626

spectrum to a set of predetermined model power spectra, each said power spectrum being associated with an image or predetermined effect.

Dependent claims 2, 5-10, and 14-18 are allowed because they further limit their respective independent claims.
